

# Textile Origins

## INSTALLATION INSTRUCTIONS

**For best results, it is recommended that a wallcovering installer experienced in textile wallcovering installation be employed.**

### STOP AND READ BEFORE INSTALLING

Important — If at any time during the installation a discrepancy is discovered, STOP. Contact Gilford to resolve before proceeding. No claims will be honored beyond the initial three strips of wallcovering hung.

Before cutting, examine goods to make certain pattern color is satisfactory and as ordered. Check all roll tickets to determine if more than one run or lot of the same pattern is to be installed.

Cut panels and headers in roll number sequence, making sure that run numbers are broken at INSIDE corners only. Textile commercial wallcovering must be installed in reverse roll number sequence. Allow for matching of repeats and trimming at the ceiling and the baseboard.

Number panels and headers as they are cut from the roll and apply to the wall in the same sequence. Be sure to cut in reverse roll number sequence.

Install all wallcovering under adequate lighting and evaluate for color uniformity under adequate lighting conditions. When this is not possible duplicate the final lighting conditions as nearly as possible.

Extra care and precaution must be taken to keep adhesive and dirt from getting on the surface of the textile.
